Contents for Volume 162

Number 1, 7 *May* 1993

MINI REVIEW

WYNNE-EDWARDS, V. C., A Rationale for Group Selection 1

SHERRATT, J. A., SAGE, E. H. and MURRAY, J. D., Chemical Control of Eukaryotic Cell Movement: A New Model 23

HORIKAWA, Y., Noise Effects on Spike Propagation During the Refractory Period in the FitzHugh–Nagumo Model 41

MELCHER, U., HIV-1 Proteinase as Structural Model of Intercellular Transport Proteins of Plant Viruses 61

RECKNAGEL, R.-D., WELLER, K. and KÖHLER, J.-M., A Simple Method to Forecast Good Promoters of *Escherichia coli* by Means of Doublet Frequencies 75

SORRIBAS, A., SAMITIER, S., CANELA, E. I. and CASCANTE, M., Metabolic Pathway Characterization from Transient Response Data Obtained *In Situ*: Parameter Estimation in S-system Models 81

GAÁL, G., Calculation of Movement Direction from Firing Activities of Neurons in Intrinsic Co-ordinate Systems Defined by their Preferred Directions 103

Number 2, 21 *May* 1993

YOTSUMOTO, A., A Diffusion Model for Phyllotaxis 131

MAHAFFY, J. M., Variation in Concentrations of RNAs and Proteins Involved in Gene Expression of *Escherichia coli* 153

HIRATA, H., Information of Organization in Ecological Systems: Nutrient > Energy > Carbon 187

PECK, J. R., Friendship and the Evolution of Co-operation 195

KAMIYA, A., WAKAYAMA, H. and BABA, K., Optimality Analysis of Vascular-tissue System in Mammals for Oxygen Transport 229

GUISEZ, Y., ROBBENS, J., REMAUT, E. and FIERS, W., Folding of the MS2 Coat Protein in *Escherichia coli* is Modulated by Translational Pauses Resulting from mRNA Secondary Structure and Codon Usage: A Hypothesis . 243

MOORE, A. M. F. and ELLERS, O., A Functional Morphospace, Based on Dimensionless Numbers, for a Circumferential, Calcite, Stabilizing Structure in Sand Dollars 253

Number 3, 7 *June* 1993

WILLS, P. R., Self-organization of Genetic Coding 267

COLGAN, D. J., DNA Regeneration in the Polymerase Chain Reaction . . 289

VEGA-REDONDO, F. and HASSON, O., A Game-theoretic Model of Predator–Prey Signaling 309

SELVAKUMAR, S., SHARAN, M. and SINGH, M. P., A Mathematical Model for the Elimination of Carbon Monoxide in Humans 321

MOGI, K., Graphic Analysis of Coupling in Biological Systems . . . 337

KAM, M. and DEGEN, A. A., Energetics of Lactation and Growth in the Fat Sand Rat, *Psammomys obesus*: New Perspectives of Resource Partitioning and the Effect of Litter Size 353

MOZRZYMAS, J. W. and BARTOSZKIEWICZ, M., The Discrete Nature of Biological Membrane Conductance, Channel Interaction Through Electrolyte Layers and the Cable Equation 371

MYERSCOUGH, M. R., A Simple Model for Temperature Regulation in Honeybee Swarms 381

LETTERS TO THE EDITOR

SHCHERBAK, V. I., The Symmetrical Architecture of the Genetic Code Systematization Principle 395

SHCHERBAK, V. I., Twenty Canonical Amino Acids of the Genetic Code: The Arithmetical Regularities. Part I. 399

Number 4, 21 *June* 1993

WOLDENBERG, M. J., O'NEILL, M. P., QUACKENBUSH, L. J. and PENTNEY, R. J., Models for Growth, Decline and Regrowth of the Dendrites of Rat Purkinje Cells Induced From Magnitude and Link-length Analysis . . 403

KHANIN, M. A. and BUKHAROV, I. B., Optimal Pulmonary Arterial Blood Pressure 431

ROSSO, L., LOBRY, J. R. and FLANDROIS, J. P., An Unexpected Correlation between Cardinal Temperatures of Microbial Growth Highlighted by a New Model 447

PHILLIPS, R. J. and DUNGAN, S. R., Asymptotic Analysis of Flow in Sieve Tubes with Semi-permeable Walls 465

BÜRGER, R., Predictions of the Dynamics of a Polygenic Character Under Directional Selection 487

GETZ, W. M., Invasion and Maintenance of Alleles that Influence Mating and Parental Success 515

Index to Volume 162

Alleles that influence mating and parental success, invasion and maintenance of, 515
Amino acids, canonical, twenty, of the genetic code: the arithmetical regularities (letter), 399
Architecture, symmetrical, of the genetic code systematization principle (letter), 395
Arterial blood pressure, pulmonary, optimal, 431
Asymptotic analysis of flow in sieve tubes with semi-permeable walls, 465

BABA, K. (see KAMIYA, A.), 229
BARTOSZKIEWICZ, M. (see MOZRZYMAS, J. W.), 371
Biological systems, graphic analysis of coupling in, 337
Blood pressure, arterial, pulmonary, optimal, 431
BUKHAROV, I. B. (see KHANIN, M. A.), 431
BÜRGER, R., Predictions of the dynamics of polygenic character under directional selection, 487

Cable equation, the discrete nature of biological membrane conductance, channel interaction through electrolyte layers and, 371
Calcite, stabilizing structure in sand dollars, a functional morphospace for, 253
CANELA, E. I. (see SORRIBAS, A.), 81
Carbon monoxide in humans, a mathematical model for elimination of, 321
CASCANTE, M. (see SORRIBAS, A.), 81
Cell, eukaryotic, movement, chemical control of; a new model, 23
Cells, Purkinje, rat, models for growth, decline and regrowth of the dendrites of, 403
Coat protein, MS2, folding in *Escherichia coli* is modulated by translational pauses resulting from mRNA secondary structure and codon usage, 243
COLGAN, D. J., DNA regeneration in the polymerase chain reaction, 289
Co-operation, friendship and the evolution of, 195
Coupling in biological systems, graphic analysis of, 337
Channel interaction through electrolyte layers; the discrete nature of biological membrane conductance, 371
Character, polygenic, under directional selection, predictions of the dynamics of, 487
Chemical control of eukaryotic cell movement; a new mode, 23
Circumferential, calcite, stabilizing structure in sand dollars, a functional morphospace for, 253

DEGEN A. A. (see KAM, M.), 353
Dendrites of rat Purkinje cells, models for growth, decline and regrowth of, 403
Diffusion model for phyllotaxis, 131
DNA regeneration in the polymerase chain reaction, 289
Doublet frequencies, a simple method to forecast good promoters of *Escherichia coli* by means of, 75
DUNGAN, S. R. (see PHILLIPS, R. J.), 465
Dynamics of a polygenic character under directional selection, predictions of, 487

Ecological systems, information of organization in; nutrient > energy > carbon, 187
Electrolyte layers, channel interaction through; biological membrane conductance, 371
ELLERS, O. (see MOORE, A. M. F.), 253
Energetics of lactation and growth in the fat sand rats, *Psammomys obesus*; resource partitioning and effect of litter size, 353

Escherichia coli: folding of the MS2 coat protein is modulated by translational pauses resulting from mRNA secondary structure and codon usage, 243
Escherichia coli, a simple method to forecast good promoters of, by means of doublet frequencies, 75
Escherichia coli, variation in concentrations of RNAs and proteins involved in gene expression of, 153
Eukaryotic cell movement, chemical control of; a new model, 23
Evolution of co-operation, and friendship, 195

FIERS, W. (see GUISEZ, Y.), 243
FitzHugh-Nagumo model, noise effects on spike propagation during the refractory period in, 41
FLANDROIS, J. P. (see ROSSO, L.), 447
Flow in sieve tubes with semi-permeable walls, asymptotic analysis of, 465
Folding of the MS2 coat protein in *Escherichia coli* is modulated by translational pauses resulting from mRNA secondary structure and codon usage, 243
Friendship and the evolution of co-operation, 195

GAÁL, G., Calculation of movement direction from firing activities of neurons in intrinsic co-ordinate systems defined by their preferred directions, 103
Game-theoretic model of predatory–prey signaling, 309
Gene expression of *Escherichia coli*, variation in concentrations of RNAs and proteins involved in, 153
Genetic code systematization principle, the symmetrical architecture of (letter), 395
Genetic code, twenty canonical amino acids of; the arithmetic irregularities (letter), 399
Genetic coding, self-organization of, 267
GETZ, W. M., Invasion and maintenance of alleles that influence mating and parental success, 515
Graphic analysis of coupling in biological systems, 337
Group selection, a rationale for, 1
Growth, decline and regrowth of the dendrites of rat Purkinje cells, models for, 403
Growth in the fat sand rat, *Psammomys obesus*, energetics of; resource partitioning and the effect of litter size, 353
Growth, microbial, an unexpected correlation between cardinal temperatures of, 447
GUISEZ, Y., ROBBENS J., REMAUT, E. and FIERS, W., Folding of the MS2 coat protein in *Escherichia coli* is modulated by translational pauses resulting from mRNA secondary structure and codon usage: a hypothesis, 243

HASSON, O. (see VEGA-REDONDO, F.), 309
HIRATA, H., Information of organization in ecological systems: nutrient > energy > carbon, 187
HIV-1 proteinase as structural model of intercellular transport proteins of plant viruses, 61
Honeybee swarms, a simple model for temperature regulation in, 381
HORIKAWA, Y., Noise effects on spike propagation during the refractory period in the FitzHugh–Nagumo model, 41
Humans, a mathematical model for the elimination of carbon monoxide in, 321

Intercellular transport proteins of plant viruses, HIV-1 proteinase as structural model of, 61

KAM, M. and DEGEN, A. A., Energetics of lactation and growth in the fat sand rat, *Psammomys obesus*: new perspectives of resource partitioning and the effect of litter size, 353
KAMIYA, A., WAKAYAMA, H. and BABA, K., Optimality analysis of vascular-tissue system in mammals for oxygen transport, 229

KHANIN, M. A. and BUKHAROV, I. B., Optimal pulmonary arterial blood pressure, 431
KÖHLER, J.-M. (see RECKNAGEL, R.-D.), 75

Lactation and growth in the fat sand rate, *Psammomys obesus*, energetics of; resource partitioning and the effect of litter size, 353
Litter size; energetics of lactation and growth in the fat sand rat, *Psammomys obesus*, 353
LOBRY, J. R. (see ROSSO, L.), 447

MAHAFFY, J. M., Variation in concentrations of RNAs and proteins involved in gene expression of *Escherichia coli*, 153
Mammals: optimal analysis of vascular-tissue system for oxygen transport, 229
Mating and parental success, invasion and maintenance of influencing alleles, 515
MELCHER, U., HIV-1 proteinase as structural model of intercellular transport proteins of plant viruses, 61
Membrane conductance; channel interaction through electrolyte layers, 371
Metabolic pathway characterization from transient response data obtained *in situ*; parameter estimation in S-system models, 81
Microbial growth, an unexpected correlation between cardinal temperatures of, 447
MOGI, K., Graphic analysis of coupling in biological systems, 337
MOORE, A. M. F. and ELLERS, O., A functional morphospace, based on dimensionless numbers, for a circumferential, calcite, stabilizing structure in sand dollars, 253
Morphospace, functional, based on dimensionless numbers, for a circumferential, calcite, stabilizing structure in sand dollars, 253
Movement direction calculated from firing activities of neurons in intrinsic co-ordinate systems defined by their preferred directions, 103
Movement, eukaryotic cell, chemical control of; a new model, 23
MOZRZYMAS, J. W. and BARTOSZKIEWICZ, M., The discrete nature of biological membrane conductance, channel interaction through electrolyte layers and the cable equation, 371
mRNA secondary structure and codon usage, modulation by translational pauses resulting from; folding of the MS2 coat protein in *Escherichia coli*, 243
MURRAY, J. D. (see SHERRATT, J. A.), 23
MYERSCOUGH, M. R., A simple model for temperature regulation in honeybee swarms, 381

Neurons, calculation of movement direction from firing activities of, 103
Noise effects on spike propagation during the refractory period in the FitzHugh–Nagumo model, 41
Nutrient > energy > carbon; information of organization in ecological systems, 187

O'NEILL, M. P. (see WOLDENBERG, M. J.), 403
Organization in ecological systems, information of; nutrient > energy > carbon, 187
Oxygen transport, optimal analysis of vascular-tissue system in mammals for, 229

Parental success, invasion and maintenance of influencing alleles, 515
PECK, J. R., Friendship and the evolution of co-operation, 195
PENTNEY, R. J. (see WOLDENBERG, M. J.), 403
PHILLIPS, R. J. and DUNGAN, S. R., Asymptotic analysis of flow in sieve tubes with semi-permeable walls, 465
Phyllotaxis, a diffusion model for, 131
Plant viruses, HIV-1 proteinase as structural model of intercellular transport proteins of, 61
Polygenic character under directional selection, predictions of the dynamics of, 487
Polymerase chain reaction, DNA regeneration in, 289
Predator–prey signaling; a game-theoretic model, 309
Promoters, good, of *Escherichia coli*, forecast by means of doublet frequencies, 75

Proteins involved in gene expression of *Escherichia coli*, variation in concentrations of RNAs and, 153
Psammomys obesus, energetics of lactation and growth; resource partitioning and the effect of litter size, 353
Pulmonary arterial blood pressure, optimal, 431
Purkinje cells, rat, models for growth, decline and regrowth of the dendrites of, 403

QUACKENBUSH, L. J. (see WOLDENBERG, M. J.), 403

Rat, *Psammomys obesus*, energetics of lactation and growth in; resource partitioning and the effect of litter size, 353
Rat Purkinje cells, models for growth, decline and regrowth of the dendrites of, 403
RECKNAGEL, R.-D., WELLER, K. and KÖHLER, J.-M., A simple method to forecast good promoters of *Escherichia coli* by means of doublet frequencies, 75
Regulation, temperature, in honeybee systems; a simple model, 381
REMAUT, E. (see GUISEZ, Y.), 243
Resource partitioning; energetics of lactation and growth in the fat sand rat, *Psammomys obesus*, 353
RNAs and proteins involved in gene expression of *Escherichia coli*, variation in concentrations of, 153
ROBBENS, J. (see GUISEZ, Y.), 243
ROSSO, L., LOBRY, J. R. and FLANDROIS, J. P., An unexpected correlation between cardinal temperatures of microbial growth highlighted by a new model, 447

SAGE, E. H. (see SHERRATT, J. A.), 23
SAMITIER, S. (see SORRIBAS, A.), 81
Sand dollars, a functional morphospace for a circumferential, calcite, stabilizing structure in, 253
Selection, directional, predictions of the dynamics of a polygenic character under, 487
Selection, group, a rationale for, 1
Self-organization of genetic coding, 267
SELVAKUMAR, S., SHARAN, M. and SINGH, M. P., A mathematical model for the elimination of carbon monoxide in humans, 321
Semi-permeable walls, asymptotic analysis of flow in sieve tubes with, 465
SHARAN, M. (see SELVAKUMAR, S.), 321
SHCHERBACK, V. I., The symmetrical architecture of the genetic code systematization principle (letter), 395
SHCHERBAK, V. I., Twenty canonical amino acids of the genetic code: the arithmetical regularities, part I (letter), 399
SHERRATT, J. A., SAGE, E. H. and MURRAY, J. D., Chemical control of eukaryotic cell movement: a new model, 23
Sieve tubes with semi-permeable walls, asymptotic analysis of flow in, 465
Signaling, predator–prey; a game theoretic model, 309
SINGH, M. P. (see SELVAKUMAR, S.), 321
SORRIBAS, A., SAMITIER, S., CANELA, E. I. and CASANTE, M., Metabolic pathway characterization from transient response data obtained *in situ*: parameter estimation in S-system models, 81
Spike propagation during the refractory period in the FitzHugh–Nagumo model, noise effects on, 41
S-system models; metabolic pathway characterization from transient response data obtained *in situ*, 81
Swarms, honeybee, a simple model for temperature regulation in, 381
